Chapter 1

Hierarchical Index

1.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

MonoBehaviour	
BombScript	5
Bullets	6
ChangeScene	7
CoinScript	8
CrateScript	9
CurrentHealth	10
DestroyByTime	11
GameCamera	12
GameController	13
GameManager	16
Health	17
PlayerController	19
MedPack	18
ObjectBehavior2	19
PlayerPhysics	22
QuitGame	23
ScoreManager	24
SpawnFloor	25
TestColliderandHealth	26

Chapter 2

Class Index

2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

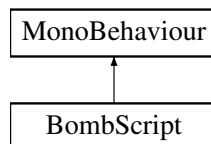

BombScript	5
Bullets	6
ChangeScene	7
CoinScript	8
CrateScript	9
CurrentHealth	10
DestroyByTime	11
GameCamera	12
GameController	13
GameManager	16
Health	17
MedPack	18
ObjectBehavior2	19
PlayerController	19
PlayerPhysics	22
QuitGame	23
ScoreManager	24
SpawnFloor	25
TestColliderandHealth	26

Chapter 3

Class Documentation

3.1 BombScript Class Reference

Inheritance diagram for BombScript:

Public Member Functions

- void [Start](#) ()
Stuff to do at the start, gets attached animator and audio source
- void [Update](#) ()
Updates per frame, moves object left per frame, checks if dead, if true, starts death animation& sound then destroys object
- void [OnTriggerEnter](#) (Collider col)

Public Attributes

- Animator [BombEnemy](#)
The bomb enemy.
- AudioSource [ExplosionSD](#)
The explosion S.
- float [EnemySpeed](#) = 0.1f
The enemy speed.
- int [scoreValue](#) = 10
Value for destroying a bomb

3.1.1 Member Function Documentation

3.1.1.1 void BombScript.OnTriggerEnter (Collider col) [inline]

Raises the trigger enter event.

Parameters

<i>col</i>	Col collision parameter to detect collisions
<i>return</i>	Tag "Player" collision causes Health call, Dmg received & object destruct

3.1.1.2 void BombScript.Start () [inline]

Stuff to do at the start, gets attached animator and audio source

3.1.1.3 void BombScript.Update () [inline]

Updates per frame, moves object left per frame, checks if dead, if true, starts death animation& sound then destroys object

3.1.2 Member Data Documentation

3.1.2.1 Animator BombScript.BombEnemy

The bomb enemy.

3.1.2.2 float BombScript.EnemySpeed = 0.1f

The enemy speed.

3.1.2.3 AudioSource BombScript.ExplosionSD

The explosion S.

3.1.2.4 int BombScript.scoreValue = 10

Value for destroying a bomb

The documentation for this class was generated from the following file:

- BombScript.cs

3.2 Bullets Class Reference

Inheritance diagram for Bullets:

Public Member Functions

- void [Update](#) ()

Update called once per frame, moves object right, destroys object after certain time

- void `OnTriggerEnter` (Collider Hit)
Collider trigger, on hit do something

Public Attributes

- float `Bulletspeed` = 5
The bulletspeed.
- float `Dmg` = 5
The damage.

3.2.1 Member Function Documentation

3.2.1.1 void Bullets.OnTriggerEnter (Collider Hit) [inline]

Collider trigger, on hit do something

Parameters

<i>Hit</i>	Hit collision detect
<i>Return</i>	> If hit is obstacle, destroy object and this, if hit is enemy, enemy is damaged

3.2.1.2 void Bullets.Update () [inline]

Update called once per frame, moves object right, destroys object after certain time

3.2.2 Member Data Documentation

3.2.2.1 float Bullets.Bulletspeed = 5

The bulletspeed.

3.2.2.2 float Bullets.Dmg = 5

The damage.

The documentation for this class was generated from the following file:

- Bullets.cs

3.3 ChangeScene Class Reference

Inheritance diagram for ChangeScene:

Public Member Functions

- void [ChangeToScene](#) (string sceneToChange)
Changes to scene.

3.3.1 Member Function Documentation

3.3.1.1 void [ChangeScene.ChangeToScene](#) (string *sceneToChange*) [inline]

Changes to scene.

Parameters

<i>sceneToChange</i>	Scene to change.
----------------------	------------------

The documentation for this class was generated from the following file:

- ChangeScene.cs

3.4 CoinScript Class Reference

Inheritance diagram for CoinScript:

Public Member Functions

- void [Start](#) ()
Start this instance. Grabs audio source and adds to component.
- void [Update](#) ()
Updates per frame. Destroys object after 10 seconds
- void [OnTriggerEnter](#) (Collider col)
Triggers object destruction on collision

Public Attributes

- AudioSource [coinSFX](#)
The coin sound effect. Plays on pickup.
- int **CoinValue** = 10

3.4.1 Member Function Documentation

3.4.1.1 void [CoinScript.OnTriggerEnter](#) (Collider *col*) [inline]

Triggers object destruction on collision

Parameters

<i>col</i>	Col collision parameter to detect collisions
------------	--

3.4.1.2 void CoinScript.Start () [inline]

Start this instance. Grabs audio source and adds to component.

3.4.1.3 void CoinScript.Update () [inline]

Updates per frame. Destroys object after 10 seconds

3.4.2 Member Data Documentation

3.4.2.1 AudioSource CoinScript.coinSFX

The coin sound effect. Plays on pickup.

summary> Variable holding coin value for increasing score.

The documentation for this class was generated from the following file:

- CoinScript.cs

3.5 CrateScript Class Reference

Inheritance diagram for CrateScript:

Public Member Functions

- void [Start](#) ()
Sets attached animations and audio sources.
- void [Update](#) ()
Updates every frame. Moves object, checks isDead. If true, destroys object, plays animation.
- void [OnTriggerEnter](#) (Collider col)
Raises the trigger enter event.

Public Attributes

- Animator [CrateObject](#)
The crate object animation.
- AudioSource [ExplosionSFX](#)
The explosion sound effect.
- float [EnemySpeed](#) = 0.1f
Speed of GameObject.

- int [BoxScore](#) = 10

Points for destroying the nearly indestructable box

3.5.1 Member Function Documentation

3.5.1.1 void [CrateScript.OnTriggerEnter](#) (Collider *col*) [inline]

Raises the trigger enter event.

Parameters

<i>col</i>	Col collision parameter to detect collisions.
<i>return</i>	Tag "Player" collision causes Health call, Dmg received & object destruct

3.5.1.2 void [CrateScript.Start](#) () [inline]

Sets attached animations and audio sources.

3.5.1.3 void [CrateScript.Update](#) () [inline]

Updates every frame. Moves object, checks isDead. If true, destroys object, plays animation.

3.5.2 Member Data Documentation

3.5.2.1 int [CrateScript.BoxScore](#) = 10

Points for destroying the nearly indestructable box

3.5.2.2 Animator [CrateScript.CrateObject](#)

The crate object animation.

3.5.2.3 float [CrateScript.EnemySpeed](#) = 0.1f

Speed of GameObject.

3.5.2.4 AudioSource [CrateScript.ExplosionSFX](#)

The explosion sound effect.

The documentation for this class was generated from the following file:

- [CrateScript.cs](#)

3.6 CurrentHealth Class Reference

Inheritance diagram for CurrentHealth:

Public Member Functions

- void [Awake](#) ()
Initiates current health and grabs text component
- void [Update](#) ()
At every frame, update current [Health](#)

Static Public Attributes

- static float [cHealth](#)
Variable to hold current [Health](#)

3.6.1 Member Function Documentation

3.6.1.1 void CurrentHealth.Awake () [inline]

Initiates current health and grabs text component

3.6.1.2 void CurrentHealth.Update () [inline]

At every frame, update current [Health](#)

3.6.2 Member Data Documentation

3.6.2.1 float CurrentHealth.cHealth [static]

Variable to hold current [Health](#)

The documentation for this class was generated from the following file:

- CurrentHealth.cs

3.7 DestroyByTime Class Reference

Inheritance diagram for DestroyByTime:

Public Member Functions

- void [Start](#) ()
Inititation, destroy object at lifetime

Public Attributes

- float [lifetime](#)
The lifetime of an object before being destroyed

3.7.1 Member Function Documentation

3.7.1.1 void DestroyByTime.Start () [inline]

Inititation, destroy object at lifetime

3.7.2 Member Data Documentation

3.7.2.1 float DestroyByTime.lifetime

The lifetime of an object before being destroyed

The documentation for this class was generated from the following file:

- DestroyByTime.cs

3.8 GameCamera Class Reference

Inheritance diagram for GameCamera:

Public Member Functions

- void [SetTarget](#) (Transform t)
Sets the target to aim for
- void [Update](#) ()
Update per frame, transforms object to target vector
- float [IncrementTowards](#) (float n, float [target](#), float a)
Increments param n towards target by speed

Public Attributes

- Transform [target](#)
Vector target to aim for.
- float [trackSpeed](#) = 10
The track speed.

3.8.1 Member Function Documentation

3.8.1.1 `float GameCamera.IncrementTowards (float n, float target, float a) [inline]`

Increments param *n* towards *target* by speed

Returns

The towards.

Parameters

<i>n</i>	First vector, current position vector of cam
<i>target</i>	Second vector, target vector for cam
<i>a</i>	The alpha component.

3.8.1.2 `void GameCamera.SetTarget (Transform t) [inline]`

Sets the target to aim for

Parameters

<i>t</i>	vector to aim for
----------	-------------------

3.8.1.3 `void GameCamera.Update () [inline]`

Update per frame, transforms object to target vector

3.8.2 Member Data Documentation

3.8.2.1 `Transform GameCamera.target`

Vector target to aim for.

3.8.2.2 `float GameCamera.trackSpeed = 10`

The track speed.

The documentation for this class was generated from the following file:

- GameCamera.cs

3.9 GameController Class Reference

Inheritance diagram for GameController:

Public Member Functions

- void [Update](#) ()
Update per frame, randomizer for spawning between objects
- void [Start](#) ()
initializer to start time for waves, sets hazards to spawn, spawn time, wave time and position to spawn
- IEnumerator **SpawnWaves** ()

Public Attributes

- GameObject [Object1](#)
1st Placement for gameObject spawning.
- GameObject [Object2](#)
2nd Placement for gameObject spawning.
- GameObject [Object3](#)
3rd Placement for gameObject spawning.
- GameObject [Object4](#)
4th Placement for gameObject spawning.
- GameObject [Object5](#)
5th Placement for gameObject spawning.
- GameObject [Object6](#)
6th Placement for gameObject spawning.
- GameObject [hazard](#)
Hazard spot for randomizing between 3 objects.
- Vector3 [spawnValues](#)
The spawn values.
- int [hazardCount](#)
The hazard count.
- float [spawnWait](#)
The spawn wait.
- float [startWait](#)
The start wait.
- float [waveWait](#)
The wave wait.
- int [choice](#)
Float Randomizer for objects summary>

3.9.1 Member Function Documentation

3.9.1.1 void GameController.Start () [inline]

initializer to start time for waves, sets hazards to spawn, spawn time, wave time and position to spawn

3.9.1.2 void GameController.Update () [inline]

Update per frame, randomizer for spawning between objects

3.9.2 Member Data Documentation

3.9.2.1 GameObject GameController.hazard

Hazard spot for randomizing between 3 objects.

3.9.2.2 int GameController.hazardCount

The hazard count.

3.9.2.3 GameObject GameController.Object1

1st Placement for gameObject spawning.

3.9.2.4 GameObject GameController.Object2

2nd Placement for gameObject spawning.

3.9.2.5 GameObject GameController.Object3

3rd Placement for gameObject spawning.

3.9.2.6 GameObject GameController.Object4

4th Placement for gameObject spawning.

3.9.2.7 GameObject GameController.Object5

5th Placement for gameObject spawning.

3.9.2.8 GameObject GameController.Object6

6th Placement for gameObject spawning.

3.9.2.9 Vector3 GameController.spawnValues

The spawn values.

3.9.2.10 float GameController.spawnWait

The spawn wait.

3.9.2.11 float GameController.startWait

The start wait.

3.9.2.12 float GameController.waveWait

The wave wait.

The documentation for this class was generated from the following file:

- GameController.cs

3.10 GameManager Class Reference

Inheritance diagram for GameManager:

Public Member Functions

- void [Start](#) ()
At start, get attached gameobject and spawn player
- void [SpawnPlayer](#) ()
Spawns the player and sets camera on player

Public Attributes

- GameObject [player](#)
Gameobject spot to place player.
- [GameCamera](#) [cam](#)
Gameobject camera.

3.10.1 Member Function Documentation

3.10.1.1 void GameManager.SpawnPlayer () [inline]

Spawns the player and sets camera on player

3.10.1.2 void GameManager.Start () [inline]

At start, get attached gameobject and spawn player

3.10.2 Member Data Documentation

3.10.2.1 GameCamera GameManager.cam

Gameobject camera.

3.10.2.2 GameObject GameManager.player

Gameobject spot to place player.

The documentation for this class was generated from the following file:

- GameManager.cs

3.11 Health Class Reference

Inheritance diagram for Health:

Public Member Functions

- void `ReceiveDmg` (float dmg)
Damage function, subtracts dmg from current health ///
- bool `isDead` ()
Checks if the object is dead depending on current health ///

Public Attributes

- float `currentHealth`
The current health.

3.11.1 Member Function Documentation

3.11.1.1 bool Health.isDead () [inline]

Checks if the object is dead depending on current health ///

Returns

true, if dead was dead, false target is still alive.

3.11.1.2 void Health.ReceiveDmg (float dmg) [inline]

Damage function, subtracts dmg from current health ///

Parameters

<i>dmg</i>	Damage to take
------------	----------------

3.11.2 Member Data Documentation

3.11.2.1 float Health.currentHealth

The current health.

The documentation for this class was generated from the following file:

- Health.cs

3.12 MedPack Class Reference

Inheritance diagram for MedPack:

Public Member Functions

- void [Update](#) ()
Updates per frame, moves object left
- void [OnTriggerEnter](#) (Collider col)
Object trigger on collision

Public Attributes

- float [MedSpeed](#) = 0.1f
The medpack speed.
- float [HealAMT](#) = 2
The total heal amount.

3.12.1 Member Function Documentation

3.12.1.1 void MedPack.OnTriggerEnter (Collider col) [inline]

Object trigger on collision

Parameters

<i>col</i>	Collider col
<i>Return</i>	If col == player, player gets health and this is destroyed

3.12.1.2 void MedPack.Update () [inline]

Updates per frame, moves object left

3.12.2 Member Data Documentation

3.12.2.1 float MedPack.HealAMT = 2

The total heal amount.

3.12.2.2 float MedPack.MedSpeed = 0.1f

The medpack speed.

The documentation for this class was generated from the following file:

- MedPack.cs

3.13 ObjectBehavior2 Class Reference

Inheritance diagram for ObjectBehavior2:

Public Member Functions

- void `Update` ()

Updates per frame. Changes position of object based on speed. Destroys object after 10 seconds.

Public Attributes

- float `speed` = -20f

The speed of GameObject.

3.13.1 Member Function Documentation

3.13.1.1 void ObjectBehavior2.Update () [inline]

Updates per frame. Changes position of object based on speed. Destroys object after 10 seconds.

3.13.2 Member Data Documentation

3.13.2.1 float ObjectBehavior2.speed = -20f

The speed of GameObject.

The documentation for this class was generated from the following file:

- ObjectBehavior2.cs

3.14 PlayerController Class Reference

Inheritance diagram for PlayerController:

Public Member Functions

- void [Start](#) ()
Gets player physics, animator and sets audio sources to listen
- void [Update](#) ()
Update per frame. check if player is dead, sets player speed, checks for user input
- IEnumerator [RestartLevel](#) ()
Restarts the level after a 2 second delay after death.

Public Attributes

- float [gravity](#) = 20
The gravity.
- float [speed](#) = 8
The speed.
- float [acceleration](#) = 30
The acceleration.
- float [jumpHeight](#) = 12
The height of the jump.
- float [currentSpeed](#)
The current speed.
- float [targetSpeed](#)
The target speed.
- Vector2 [amountToMove](#)
The amount to move.
- AudioSource [ShotSD](#)
The shot Sound.
- AudioSource [RollSD](#)
The roll Sound.
- AudioSource [JumpSD](#)
The jump Sound.
- AudioSource [DeathSD](#)
The death Sound.
- [PlayerPhysics](#) [playerPhysics](#)
Gets player physics script.
- Animator [Player](#)
Gets player animator.
- float [cHealth](#)
Variable to hold current health
- GameObject [Shot](#)
Sets gameobject shot for prep

3.14.1 Member Function Documentation

3.14.1.1 IEnumerator PlayerController.RestartLevel () [inline]

Restarts the level after a 2 second delay after death.

Returns

The current level.

3.14.1.2 void PlayerController.Start () [inline]

Gets player physics, animator and sets audio sources to listen

3.14.1.3 void PlayerController.Update () [inline]

Update per frame. check if player is dead, sets player speed, checks for user input

3.14.2 Member Data Documentation

3.14.2.1 float PlayerController.acceleration = 30

The acceleration.

3.14.2.2 Vector2 PlayerController.amountToMove

The amount to move.

3.14.2.3 float PlayerController.cHealth

Variable to hold current health

3.14.2.4 float PlayerController.currentSpeed

The current speed.

3.14.2.5 AudioSource PlayerController.DeathSD

The death Sound.

3.14.2.6 float PlayerController.gravity = 20

The gravity.

3.14.2.7 float PlayerController.jumpHeight = 12

The height of the jump.

3.14.2.8 AudioSource PlayerController.JumpSD

The jump Sound.

3.14.2.9 Animator PlayerController.Player

Gets player animator.

3.14.2.10 PlayerPhysics PlayerController.playerPhysics

Gets player physics script.

3.14.2.11 AudioSource PlayerController.RollSD

The roll Sound.

3.14.2.12 GameObject PlayerController.Shot

Sets gameobject shot for prep

3.14.2.13 AudioSource PlayerController.ShotSD

The shot Sound.

3.14.2.14 float PlayerController.speed = 8

The speed.

3.14.2.15 float PlayerController.targetSpeed

The target speed.

The documentation for this class was generated from the following file:

- PlayerController.cs

3.15 PlayerPhysics Class Reference

Inheritance diagram for PlayerPhysics:

Public Member Functions

- void **Start** ()
Initialization, gets collider of player and its values(size and center)
- void **Move** (Vector2 moveAmount)
Move the specified moveAmount.
- void **SetCollider** (Vector3 size, Vector3 centre)
- void **ResetCollider** ()

Public Attributes

- LayerMask **collisionMask**
Set the layer for collisionmask, player will collide with this layer
- bool **grounded**
Boolean to check if object is in contact with object from bottom
- bool **movementStopped**
Boolean to check player is no longer moving

3.15.1 Member Function Documentation

3.15.1.1 void PlayerPhysics.Move (Vector2 moveAmount) [inline]

Move the specified moveAmount.

Parameters

<i>moveAmount</i>	Move amount.
-------------------	--------------

3.15.1.2 void PlayerPhysics.Start () [inline]

Initialization, gets collider of player and its values(size and center)

3.15.2 Member Data Documentation

3.15.2.1 LayerMask PlayerPhysics.collisionMask

Set the layer for collisionmask, player will collide with this layer

3.15.2.2 bool PlayerPhysics.grounded

Boolean to check if object is in contact with object from bottom

3.15.2.3 bool PlayerPhysics.movementStopped

Boolean to check player is no longer moving

The documentation for this class was generated from the following file:

- PlayerPhysics.cs

3.16 QuitGame Class Reference

Inheritance diagram for QuitGame:

Public Member Functions

- void [ExitGameOnClick](#) ()
Exits the game on click.

3.16.1 Member Function Documentation

3.16.1.1 void QuitGame.ExitGameOnClick () [inline]

Exits the game on click.

The documentation for this class was generated from the following file:

- QuitGame.cs

3.17 ScoreManager Class Reference

Inheritance diagram for ScoreManager:

Public Member Functions

- void [Awake](#) ()
Initiates score and grabs text component
- void [Update](#) ()
At every frame, update score

Public Attributes

- Text [text](#)
Text holder to display score

Static Public Attributes

- static int [score](#)
Variable to hold score

3.17.1 Member Function Documentation

3.17.1.1 void ScoreManager.Awake () [inline]

Initiates score and grabs text component

3.17.1.2 void ScoreManager.Update () [inline]

At every frame, update score

3.17.2 Member Data Documentation

3.17.2.1 int ScoreManager.score [static]

Variable to hold score

3.17.2.2 Text ScoreManager.text

Text holder to display score

The documentation for this class was generated from the following file:

- ScoreManager.cs

3.18 SpawnFloor Class Reference

Inheritance diagram for SpawnFloor:

Public Member Functions

- void [Start](#) ()
Initialize to start time for waves. Sets Spawn position and spawns based on spawnWait ///
- IEnumerator **Spawnfloor** ()

Public Attributes

- GameObject [floor](#)
The GameObject that acts as the main floor of the game.
- Vector3 [spawnValues](#)
The spawn position values.
- float [spawnWait](#)
The delay between object spawn times.
- float [startWait](#)
The delay between the start of the game and the start of the floor spawning.

3.18.1 Member Function Documentation

3.18.1.1 void SpawnFloor.Start () [inline]

Initialize to start time for waves. Sets Spawn position and spawns based on spawnWait ///

3.18.2 Member Data Documentation

3.18.2.1 GameObject SpawnFloor.floor

The GameObject that acts as the main floor of the game.

3.18.2.2 Vector3 SpawnFloor.spawnValues

The spawn position values.

3.18.2.3 float SpawnFloor.spawnWait

The delay between object spawn times.

3.18.2.4 float SpawnFloor.startWait

The delay between the start of the game and the start of the floor spawning.

The documentation for this class was generated from the following file:

- SpawnFloor.cs

3.19 TestColliderandHealth Class Reference

Inheritance diagram for TestColliderandHealth:

Public Member Functions

- void [Update](#) ()
Update per frame to move object left to collide with player

Public Attributes

- float [PreviousHealth](#) = 0
Holder float to check previous health.
- float [NewHealth](#) = 0
Holder to check new health.

3.19.1 Member Function Documentation

3.19.1.1 void TestColliderandHealth.Update () [inline]

Update per frame to move object left to collide with player

3.19.2 Member Data Documentation

3.19.2.1 float TestColliderandHealth.NewHealth = 0

Holder to check new health.

3.19.2.2 float TestColliderandHealth.PreviousHealth = 0

Holder float to check previous health.

The documentation for this class was generated from the following file:

- TestColliderandHealth.cs
